EDUCATION

IBM Backend JS Developer
Coursera · 2024

Full Stack Developer

GPA: 3.75
Korea IT Academy · 2022

Computer Maintenance

ITPM · 2009 – 2011

SUMMARY

Passionate backend developer specialising in Node.js and TypeScript with experience building scalable RESTful APIs and full-stack applications. Delivered production systems including e-commerce and school management platforms, handling architecture and deployment. Strong background in IT systems and consulting. Growing expertise in Go and microservices design.

EXPERIENCE

Freelance Backend Developer

2025 – Present

- ◆ Designed and built RESTful APIs using Node.js and TypeScript for SMEs across Africa, supporting e-commerce and school management systems.
- ◆ Built MERN stack applications improving client operation efficiency and reducing manual processes.
- ◆ Mentored teams of junior developers, conducting design and code reviews and fostering best practices and documentation.
- ◆ Led end-to-end project delivery from requirement gathering to production release.

Backend Developer Intern · Petit Pirogue

2023 – 2024

- ◆ Developed backend for an e-commerce platform using Node.js, improving system performance and maintainability.
- ◆ Collaborated with frontend developers to integrate APIs, reducing integration issues and accelerating feature delivery.

Freelance IT Technician / Integrator

2016 – 2017

- ◆ Delivered technical support and system solutions for SMEs, including custom stock management systems built with WinDev 19 and C++/Qt.

Workshop Manager · Atelier Informatique Gabon

2012 – 2016

- ◆ Managed IT support services and Service Desk for small businesses, including network and security systems.

Desktop Developer Intern · Micro-Tech

Feb 2011 – Nov 2011

- ◆ Built desktop applications using WinDev technology.

PROJECTS

Microservices System · Go

2024

- ◆ Explored gateway + worker architecture with Go goroutines and channels for concurrent background processing.

API Time Machine · TypeScript / Node.js

2024

- ◆ Time-based API simulation enabling replay of historical API states for testing and debugging.

Arena Allocator · Go

2023

- ◆ Hands-on Go learning exercise implementing custom region-based memory allocation.

Inventory Management System · TypeScript / Node.js

2023

- ◆ RESTful backend for stock tracking with CRUD operations and real-time stock alerts.

PARTNERSHIPS

- ◆ Easywave (easywave-gabon.com)
- ◆ Secursys Vision Batiment
- ◆ Petite Pirogue (petitepirogue.com)
- ◆ NJF Services Securite Gabon
